8. (Previously Cancelled)
9. (Previously Amended) A method comprising:
running guest software in a processor mode that enables the guest software to
operate at a privilege level intended by the guest software;
identifying an attempt of the guest software to perform an operation restricted by
said processor mode;

42390P9770

PATENT

determining that the attempt of the guest software would succeed if the guest software was running outside said processor mode; and
exiting said processor mode to transfer control over the operation to a virtual machine monitor running outside said processor mode.
